## **RF Manual 6<sup>th</sup> edition**

Application and design manual for RF products

May 2005

**PHILIPS**

Henk Roelofs, Vice President &amp; General Manager RF Products

## Introduction

**The RF Manual covers a broad variety of material and many aspects about RF systems. It shows the complete product range of RF Small signal discretes, RF CATV modules and Optical Networking parts, but also consists many subjects as application diagrams, application notes, cross-references, packaging, etc.**

We keep our RF Manual as a dynamic source of information. We have committed to updating the document twice a year to allow you to be informed on important developments for your applications.

We can truly say that Philips RF Manual is THE LEADING document in the RF market.

### More application driven

For this 6<sup>th</sup> edition we changed the formula of the RF Manual a little. Now it focuses even more on applications resulting in a new chapter: 'RF applications, recommended products and recommended application notes'. In this new way you will be guided quicker and easier from your application to the most relevant products and descriptive application info.

### BAW filters

We are excited about the introduction of our new BAW filter portfolio, soon. Have a look at the BAW filter chapter to learn about key features and application areas.

### RF Manual 6<sup>th</sup> edition APPENDIX

Also the Appendix got some extra attention. In line with the main part of the manual it's more oriented on applications. To support this 2 new chapters are introduced: 'performance of cascaded RF blocks' and 'an introduction into noise'.

Via the improvement survey on the RF Manual web page many of you showed us how much you appreciate the 'basics'. Therefore the chapters "RF Application-basics" and "RF Design-basics" have been revised and published fully in this edition again.

### Interactive

This RF manual is fully interactive. If you click on a product type you will be automatically directed to more information in this manual or to the corresponding product information page on the Philips web.

## 2.2.4 Schottky diodes

### Features:

- (Very) low diode capacitance
- (Very) low forward voltage
- Single and triple-isolated diode
- (Ultra / very) small package

### Applications:

- Digital applications:
  - ultra high-speed switching
  - clamping circuits
- RF applications:
  - diode ring mixer
  - RF detector
  - RF voltage doubler

### Low-capacitance Schottky diodes

Type	Package	VR max. (V)	IF max. (mA)	VF max. (mV)	CD max. (pF)

## 2.3 RF Bipolar transistors

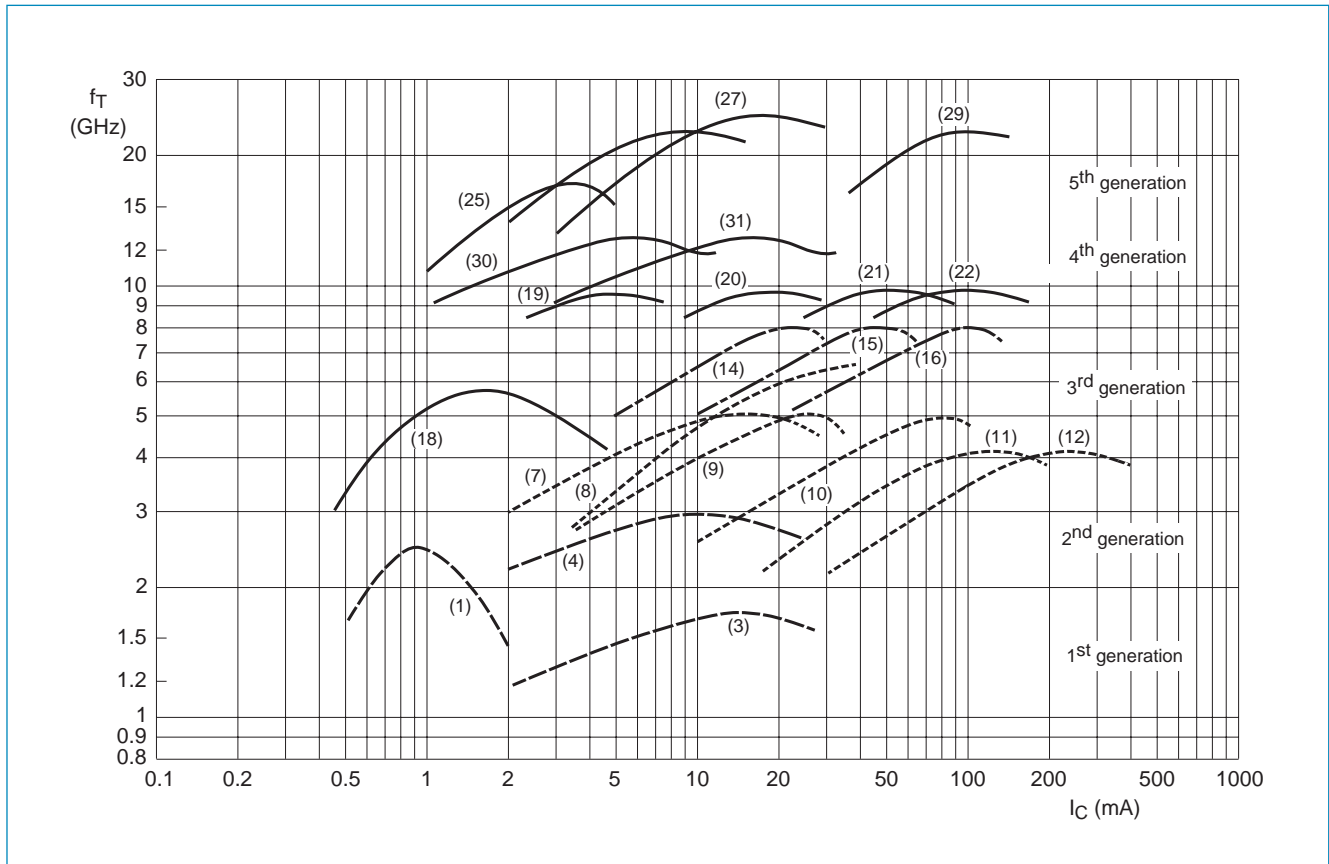

### 2.3.1 Wideband transistors

#### RF wideband transistors:

[http://www.semiconductors.philips.com/markets/mms/products/discretes/key\\_solutions/multimarket/transistors/25\\_45ghz\\_wideband/index.html](http://www.semiconductors.philips.com/markets/mms/products/discretes/key_solutions/multimarket/transistors/25_45ghz_wideband/index.html)

#### Wideband transistors

The  $f_T$ - $I_C$  curve represents Transition Frequency ( $f_T$ ) characteristics as a function of collector current ( $I_C$ ) for the six generations of RF wideband transistors. A group of transistors having the same collector current ( $I_C$ ) & similar transition frequencies ( $f_T$ ) represents a curve. The curve number matches products in the table, detailing their RF characteristics.

### 2.6.4 CATV Optical Receivers

Frequency Range	Type Number	Rmin (V/W)	Slope (dB)	FL (dB)	S22 (dB)	d3	d2	@fm (MHz)	@Pi (mW)	F @fmax	Conn.	Itot (mA)
<b>Optical Reverse Receiver</b>												
5 - 300	BGO387	800	0 - 2	± 0.3	16	-80	-70	54.25	1	7.5	--	190
<b>Forward Path Receiver</b>												
40 - 750	BGO747	800	0 - 2	1	11	-75	-63	746.5	1	7	--	205
	BGO747/FC0	750	0 - 2	1	11	-75	-63	746.5	1	7	FC	205
40 - 870	BGO807	800	0 - 2	1	11	-71	-55	854.5	1	8.5	--	205
	BGO807/FC0	750	0 - 2	1	11	-71	-55	854.5	1	8.5	FC	205
	BGO807/SC0	750	0 - 2	1	11	-71	-55	854.5	1	8.5	SC	205
	BGO827	800	0 - 2	1	11	-73	-57	854.5	1	9	--	205
	BGO827/FC0	750	0 - 2	1	11	-73	-57	854.5	1	8.5	FC	205
	BGO827/SC0	750	0 - 2	1	11	-73	-57	854.5	1	8.5	SC	205
	BGO847	800	0 - 2	1	11	-73	-63	854.5	1	8	--	205
	BGO847/SC0	750	0 - 2	1	11	-73	-63	854.5	1	8	SC	205

\*) NOTES: This table is for reference only: it contains some calculated values that are not guaranteed. For full data please refer to the latest datasheet. Some parts may still be in development. For availability please check the Philips Sales office.

#### Description:

Frequency Range	Minimum and maximum frequency in MHz at which data are characterized
@Ch/@Vo	The number of channels and the output voltage at which CTB, XM, CSO and d2 are characterized
@fm	Measurement frequency
F	Noise Figure in dB or Noise in pA/Sqrt(Hz)
FL	Flatness
Rmin	Minimum responsivity of optical receivers

## 2.7 Fiber-optic transceiver IC's

### 2.7.1 Laser Drivers

Part number	Data-rate Mb/s	Package Type	Bare Die	I <sub>mod</sub> /I <sub>Bias</sub> [mA]	Dual Loop	Input	V <sub>cc</sub>	Power Dissipation mW
TZA3047A	30-1250	SOT560-1	X	100-100	X	CML/PECL	3.3	420
TZA3047B	30-1250	SOT560-1	X	100-100	X	CML/PECL	3.3 <sub>-</sub>	420
TZA3050	30-1250	SOT560-1	X	100-100	-	CML/PECL	3.3 <sub>-</sub>	420
TZA3010B	30-3200	SOT560-1	-	60-100	-	CML/PECL	3.3 <sub>-</sub>	420
TZA3011A	30-3200	SOT560-1	X	100-100	X	CML/PECL	3.3	420
TZA3011B	30-3200	SOT560-1	X	100-100	X	CML/PECL	3.3 <sub>-</sub>	420

### 2.7.2 Trans Impedance Amplifiers

Part number	Data-rate Mb/s	Package Type	Bare Die	I <sub>n</sub> [nA]	Eq Sens [dBm]	RSSI	Output	V <sub>cc</sub>	Power Dissipation mW
TZA3036	0-155	die only	X	10	-40	Yes	50 Ohm	3.3	50
TZA3026	0-622	die only	X	67	-32	Yes	50 Ohm	3.3	60
TZA3046	0-1250	die only	X	130	-29	Yes	50 Ohm	3.3	70
TZA3013	0-2488	die only	X	450	-24	-	50 Ohm	3.3	86

■ = New

\*) NOTES:

All figures given are typical at 25 deg C

Power dissipation is given for V<sub>cc</sub> = 3.3 V

Eq. sensitivity conditions: Calculated from noise figure using a lowpass bandwidth filter at 0.7x bit rate and a source with an extinction ratio of 10% and a photodiode responsivity of 0.9A/W.

3.3<sub>-</sub> means that the output stage is capable of driving 5 V laser applications

# 3. Cross-references & Replacements

## Philips cross-references:

## 3.2 Cross-references: Philips discontinued types versus Philips replacement types

In alphabetical order of Philips discontinued type

### Abbreviations:

BS diode	Band Switch Diode
CATV	Communicatv Antenna Television System
FET	Field Effect Transistor
Varicap	Varicapricap Diode
WB trs	Wideband Transistor
OM	Optical Module

Philips discontinued type	Product family	Philips replacement type
BA277-01	BS diode	BA277
BAP142L	Pin diode	BAP142LX

## 4. Bulk Acoustic Wave Filters

In the 2<sup>nd</sup> half of 2005, Philips' RF Products Business Line will release the first devices of their new product cluster: Bulk Acoustic Wave (BAW) filters.

In RF applications we see a clear trend towards applications at ever-higher frequencies, a demand for higher performance and a requirement for small size. All these demands can be met by BAW filters.

Compared to existing ceramic and Surface Acoustic Wave (SAW) filters, BAW filters are usually smaller, and offer reduced in-band insertion loss, higher isolation and an increased steepness of the filter skirts in the lower and upper transition bands. In addition, compared to SAW filters, the center frequency versus temperature change of BAW filters is also less, and they are suitable for applications from 1 to 20 GHz. SAW filters are less suitable for applications at frequencies above 2 GHz.

The first filters to be released this year are for US PCS transmit and duplexer applications in (W-) CDMA cell-phones. Our next products will be Bluetooth antenna filters and UMTS duplexers.

Our BAW filters will be available in both a miniature over molded package and a Philips-patented Chip Scale Package. The patented Chip Scale Packaging is very suitable for seamless integration of the filters in RF front-end modules.

# 5. Packaging

## Philips green packaging:

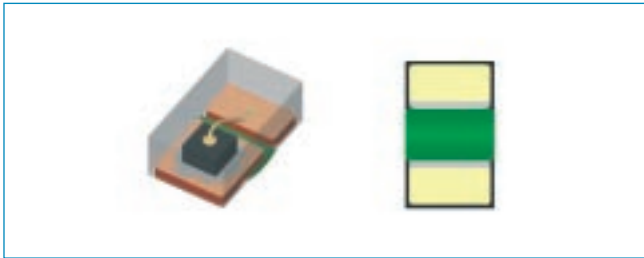

[http://www.semiconductors.philips.com/green\\_roadmap/](http://www.semiconductors.philips.com/green_roadmap/)

## Philips packaging:

<http://www.semiconductors.philips.com/package/index.html>

### New SOD882T/SOT88xT package generation

Philips is launching an innovative leadless ultra-thin plastic package technology for small-signal discrete semiconductors. This provides a solution for the clear trend towards smaller, better RF performing components, especially in the area of mobile applications: mobile communications, PDAs and notebook applications.

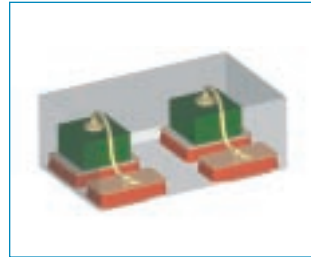

### Key features of SOD882T/SOT88xT

- Low height (0.4 mm)
- Small footprint (down to 0.62 x 0.32 mm<sup>2</sup>)
- Very flexible platform
- High Si/footprint ratio
- Excellent RF performance
- Footprint compatible to JETA standard SC-101
- Very efficient packing. 15k/7" reel
- Lead-free, green plastic.

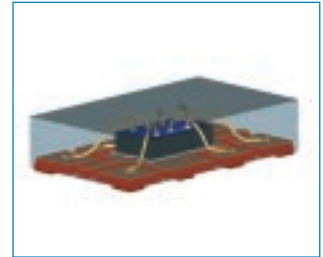

### Key application areas

- Mobile communications:
  - PIN diodes for switches
  - Varicaps for VCO
  - Varicaps for radio tuners
- Mobile applications:
  - Varicaps for mobile tuners
  - MOSFETs for mobile tuners.

The new platform has some characteristics that set it apart from standard QFN and leaded devices. Because of the special etch process used to form the lead frame, the relative freedom between the bottom layout and top layout give unprecedented design opportunities. Products like the double diode in 1006 or multi-lead design with isolated die pad become possible.

Double diode

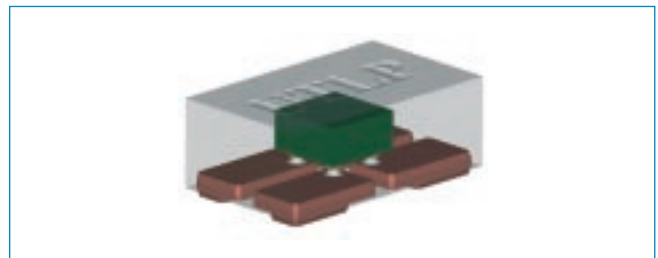

Multi lead

Also, a basic form of re-routing is possible giving some freedom to pin assignment.

For the RF market introduction, Philips will offer the SOD882T diode design with PIN and (matched) varicap diodes. All products will be RoHS compatible (lead-free, green plastic).

Because singulation for the new platform is realized by sawing through plastic alone (unlike conventional QFN, where a metal/plastic combination must be separated), accuracy similar to wafer sawing can be achieved. This allows a high Si/footprint ratio.

Devices made with the new platform exhibit excellent RF performance compared to leaded devices, because of short lead lengths. This translates into very low parasitics. RF performance can be further enhanced by using flip-chip technology.

SOD882T is compatible with Philips SOD882 in footprint and complies with the JETA standard SC101.

Packing of the product is industry standard punched tape. 2 mm pitch and 0.5 mm thickness allow 15k products per 180mm/7" reel. This means less handling on P&P equipment, reduced waste and reduced warehouse space.

# 6. Quality and Reliability

## Philips Quality handbook:

<http://www.standardics.philips.com/quality/handbook/>

### Quality

Philips has long recognized the vital importance of high quality in electronic components, and its crucial effect on the viability and economics of finished equipment.

We have achieved this through a long tradition of rigorously implementing world-class quality systems. Our business and production centers were ISO9001 first certified in 1990. We have continuously improved the quality of our organization by implementing ever more demanding quality and business management systems, like Ford TQE in 1995, QS9000 in 1998 and ISO/TS16949 certification was achieved in 2003.

For our customers, all this attention to organizational excellence has resulted in several benefits, for example, much improved supply reliability and outgoing product quality, and shorter lead-times, etc.

To support the design-in of our products, we provide 'Product Qualification Packages' to our customers. Next to the product specification, they contain detailed information on how products are made (flowcharts) and data about reliability, ESD level and chemical content. Data logg samples are available on request.

### Assembly and testing

Pre-test, assembly and final test sites are located in the Far East. All sites are ISO/TS16949 and ISO14001 certified. In our factories we have implemented the so-called BIM (Breakthrough In Manufacturing) lines – a very efficient flow concept. Each product leaving the factory is tested two times, resulting in an extremely low level of electrical return from the market.

### Reliability

Reliability assessment is an important aspect of each product development cycle. At the start of product development, reliability qualification plans are made based on what is known about the reliability performance of existing products (structural similarity). Reliability tests are performed on early prototypes to screen for potential problems as early as possible. After product release, samples are taken from production (based on structural similarity rules) and tested to verify that reliability performance still fulfills all applicable requirements.

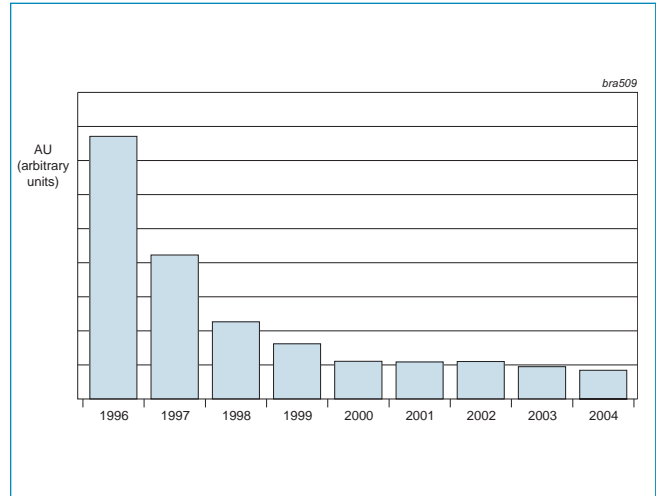

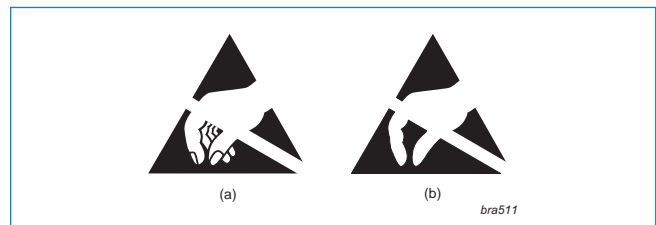

Fig.1. Decrease of customer returns/billion products sold since 1996

### ESD

All our products are ESD sensitive. Therefore our products are packaged in anti-static tape and reels. Packing boxes are marked with one of the two symbols shown in Fig.2.

We strongly recommend that customers take ESD precautions in their production facilities. Extensive descriptions of such precautions can be found in JEDEC specification JESD625-A.

A leaflet with extensive information about the nature of ESD and how it can be prevented is available from Philips on request.

### Environmental

As part of our commitment to reducing the use of hazardous substances, energy, etc., all involved organizations are ISO14001 qualified. All our products are lead-free and fulfill the RoHS directive of the EC.
